Testing details

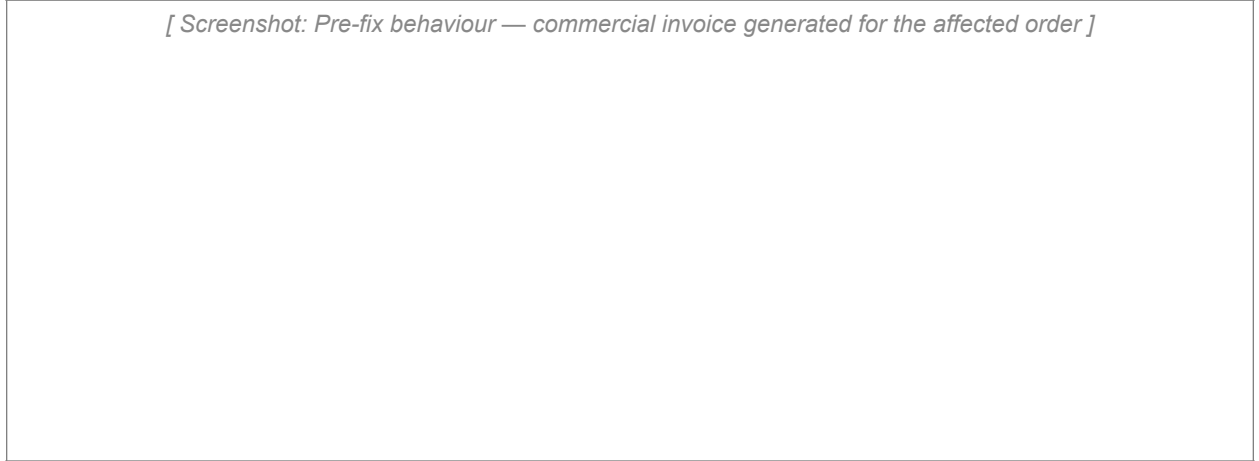

Following information specifies the plugin release details & testing observation.

Plugin name	WooCommerce UPS Shipping Plugin with Print Label
Version	6.6.4
Changelog	[New Feature] • Added a new <code>ph_ups_skip_commercial_invoice</code> filter that lets store owners skip commercial invoice generation for orders going to regions not part of WooCommerce's countries list, without affecting the shipping label or destination country.
Release details	Tested on 15-09-2026 against https://woocommerce-432251-5542255.cloudwaysapps.com/ — orders #5653–#5658.
Ticket Details	https://pluginhive.zendesk.com/agent/tickets/405507
Trello Card	https://trello.com/c/SI23TDil/1019-new-feature-add-option-to-skip-commercial-invoice-for-regions-not-in-woocommerces-country-list
Observation	Working fine for the cases executed. TC-01, TC-02, TC-03, TC-04, TC-06 and TC-07 pass, and the TC-08 regression check passes for the NI path. TC-05, the EU-origin sub-scenarios of TC-08, and TC-09 were not executed — see the individual observations.

Details of Replicated

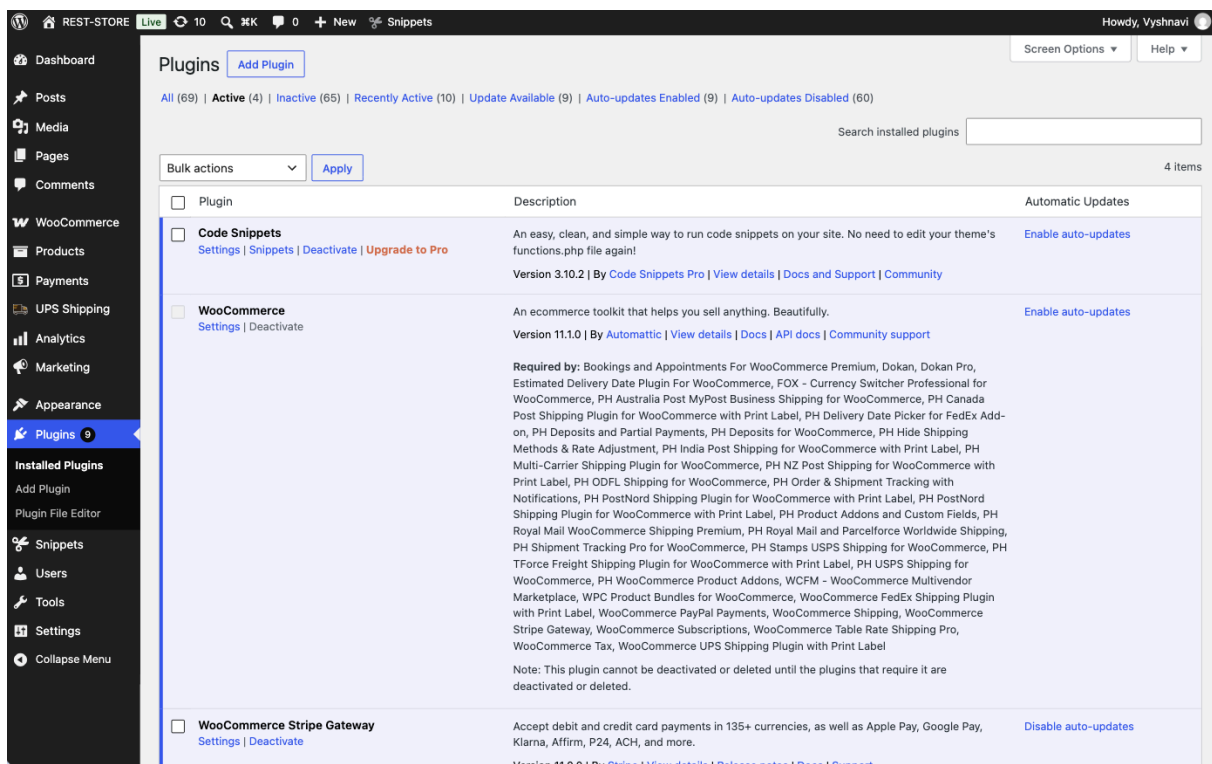

Orders shipped to Northern Ireland are treated by WooCommerce as UK (GB) orders, so the plugin always generated a commercial invoice for them, even though shipments to Northern Ireland don't need one. There was no way for a merchant to change this behaviour.

[Screenshot: Pre-fix behaviour — commercial invoice generated for the affected order]

Pre-requisites

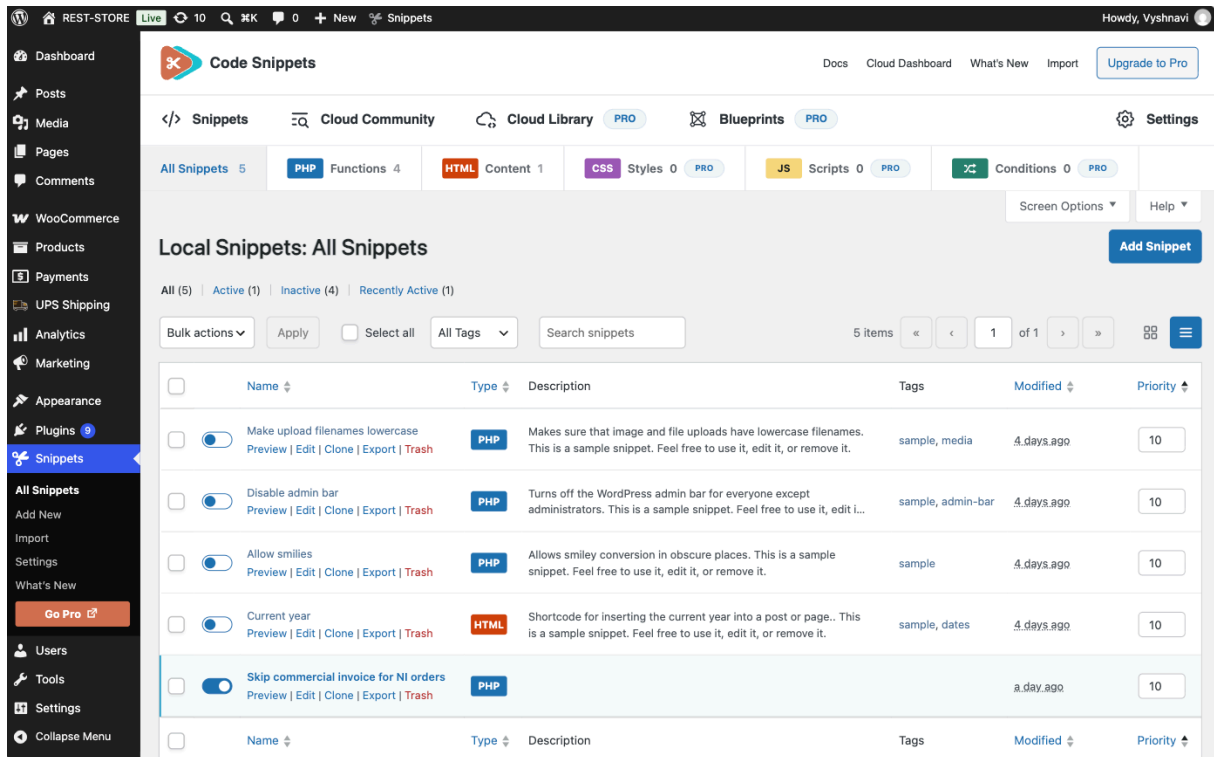

Store URL	https://woocommerce-432251-5542255.cloudwaysapps.com/
Plugin under test	WooCommerce UPS Shipping Plugin with Print Label v6.6.4
Supporting setup	1. WooCommerce UPS Shipping Plugin with Print Label v6.6.4 active, with valid UPS REST credentials registered. 2. Shipper address: REST_STORE, 1202 Chalet Lane, Harrison, AR 72601, United States. 3. Code Snippets plugin active. 4. Snippet "Skip commercial invoice for NI orders" active as a Function (PHP) snippet, global scope, priority 10, containing the <code>ph_ups_skip_commercial_invoice add_filter</code> block from the card. Activate or deactivate it per test case. 5. Test product: "Simple product - 2" (ID 4619, \$100). 6. UPS plugin Debug Mode switched OFF for the run. With it on, the plugin prints the raw shipment request/response to the screen and the order page never records the tracking number or Print Label button.

The screenshot shows the WordPress 'Plugins' page. The left sidebar contains a menu with 'Plugins' highlighted. The main content area shows a list of installed plugins. The 'WooCommerce UPS Shipping Plugin with Print Label' is listed as an active plugin. The table below summarizes the visible plugins in the screenshot.

Plugin	Description	Automatic Updates
☐ Code Snippets	An easy, clean, and simple way to run code snippets on your site. No need to edit your theme's functions.php file again! Version 3.10.2 By Code Snippets Pro View details Docs and Support Community	Enable auto-updates
☐ WooCommerce	An ecommerce toolkit that helps you sell anything. Beautifully. Version 11.1.0 By Automattic View details Docs API docs Community support	Enable auto-updates
☐ WooCommerce Stripe Gateway	Accept debit and credit card payments in 135+ currencies, as well as Apple Pay, Google Pay, Klarna, Affirm, P24, ACH, and more. Version 11.0.1 By Stripe View details Release notes Docs Support	Disable auto-updates

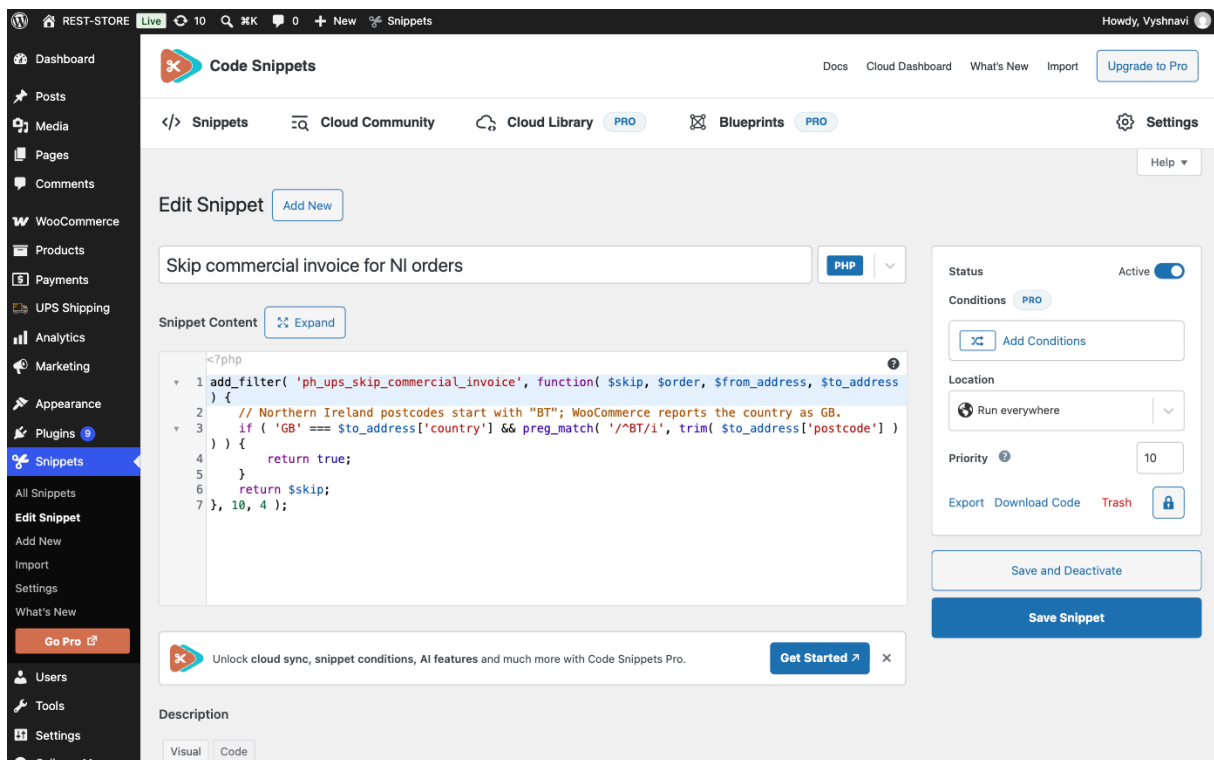

Active plugins — WooCommerce UPS Shipping Plugin with Print Label v6.6.4

The screenshot shows the Code Snippets plugin interface. The left sidebar contains navigation links for Dashboard, Posts, Media, Pages, Comments, WooCommerce, Products, Payments, UPS Shipping, Analytics, Marketing, Appearance, Plugins, Snippets, All Snippets, Add New, Import, Settings, What's New, Go Pro, Users, Tools, Settings, and Collapse Menu. The main content area displays a list of local snippets. The snippet 'Skip commercial invoice for NI orders' is highlighted, showing its details: Name, Type (PHP), Description, Tags, Modified, and Priority.

Name	Type	Description	Tags	Modified	Priority
Make upload filenames lowercase	PHP	Makes sure that image and file uploads have lowercase filenames. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, media	4 days ago	10
Disable admin bar	PHP	Turns off the WordPress admin bar for everyone except administrators. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, admin-bar	4 days ago	10

TEST RESULT

#	Test Case	Status
	Northern Ireland orders (should skip commercial invoice)	
TC-01	Create an order shipped to a Northern Ireland postcode with the BT prefix (e.g. BT1 1AA) and a GB address, with the merchant's NI snippet active. Confirm no commercial invoice is generated for the UPS shipment.	Pass
TC-02	Repeat the same test with a lowercase postcode entry (e.g. bt1 1aa). Confirm the invoice is still skipped.	Pass
TC-03	Confirm the UPS shipping label still shows GB as the destination country (the label/customs destination must not change, only the invoice generation).	Pass
	Other GB orders (should still generate commercial invoice as before)	
TC-04	Create an order shipped to a non-NI GB address (e.g. London, postcode starting with a non-BT prefix). Confirm the commercial invoice is generated exactly as before this change.	Pass
	EU orders (unaffected by this change)	
TC-05	Create an order from an EU origin to an EU destination with 'Skip commercial invoice for EU' setting enabled. Confirm the existing EU-to-EU skip behavior still works unchanged.	Not run
TC-06	Create an order to a non-GB EU country (e.g. France) with the NI snippet active. Confirm the invoice behavior is unaffected by the new filter (only GB/NI orders are targeted).	Pass
	Non-EU orders (unaffected by this change)	
TC-07	Create an order shipped to a non-EU, non-GB destination (e.g. United States). Confirm the commercial invoice is generated as before, unaffected by the new filter.	Pass
	Filter mechanics / regression check	
TC-08	With the NI snippet deactivated (no filter callback registered), confirm all order types behave exactly as they did before this update (no regression when the filter isn't used).	Partial
TC-09	Confirm no PHP warnings/notices appear in the debug log when placing orders across all the above destination types.	Not run

Northern Ireland orders (should skip commercial invoice)

TC-01 — Create an order shipped to a Northern Ireland postcode with the BT prefix (e.g. BT1 1AA) and a GB address, with the merchant's NI snippet active. Confirm no commercial invoice is generated for the UPS shipment.

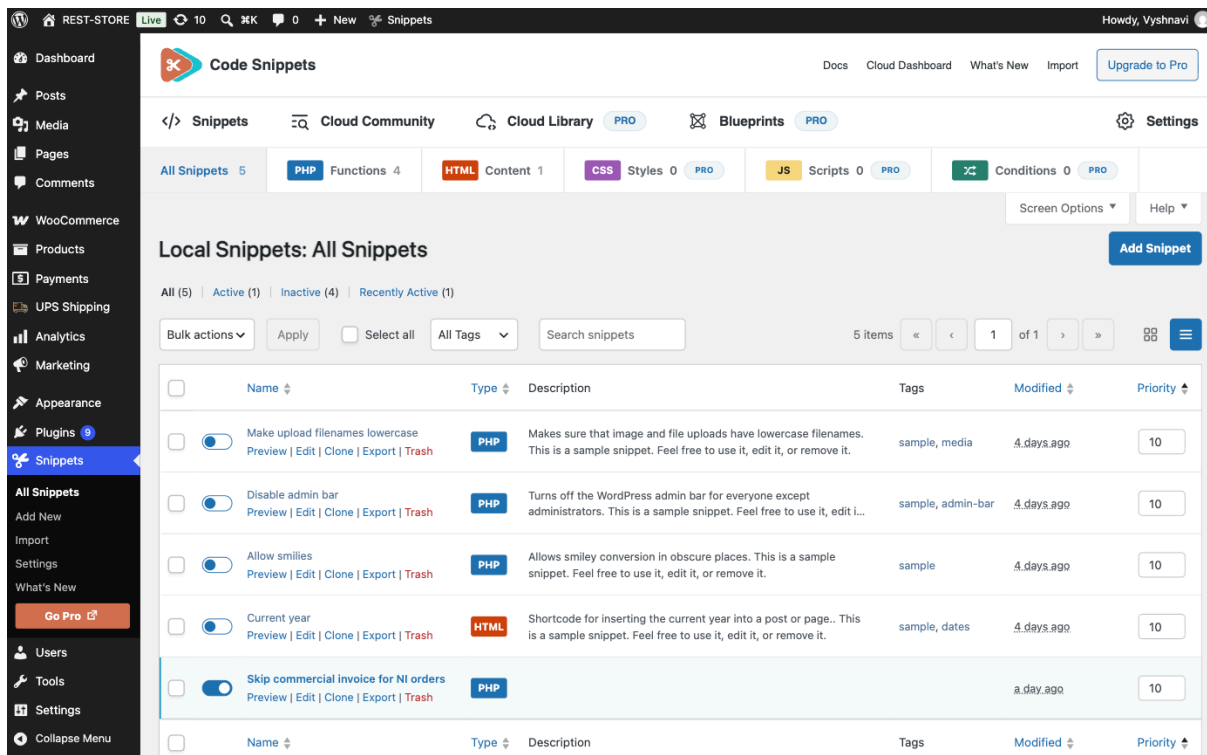

Steps

1. In wp-admin go to Snippets → All Snippets and confirm "Skip commercial invoice for NI orders" is Active.
2. On the storefront, add the test product to the cart and go to Checkout.
3. Set the shipping address to: Country "United Kingdom (UK)", Street "10 Donegall Square", Town "Belfast", County "Antrim", Postcode "BT1 5GS".
4. Select a UPS Worldwide service from the returned rates and place the order.
5. Go to WooCommerce → Orders and open the newly created order.
6. In the UPS Shipment Label box, generate the packages and confirm the shipment.
7. Inspect the UPS Shipment Label box once the tracking number is returned.

Expected Result

The shipment is created and a tracking number is returned. Only the Print Label button is rendered — no Commercial Invoice button appears and no commercial invoice PDF is produced for the order.

Evidence

The screenshot shows the Code Snippets plugin interface in a WordPress admin dashboard. The 'Snippets' menu item is selected in the left sidebar. The main area displays 'Local Snippets: All Snippets' with a list of 5 snippets. The snippet 'Skip commercial invoice for NI orders' is highlighted in blue and has its status set to 'Active' (indicated by a blue toggle switch). The snippet is a PHP file that skips the commercial invoice for Northern Ireland orders.

Name	Type	Description	Tags	Modified	Priority
Make upload filenames lowercase	PHP	Makes sure that image and file uploads have lowercase filenames. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, media	4.days.ago	10
Disable admin bar	PHP	Turns off the WordPress admin bar for everyone except administrators. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, admin-bar	4.days.ago	10
Allow smilies	PHP	Allows smiley conversion in obscure places. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample	4.days.ago	10
Current year	HTML	Shortcode for inserting the current year into a post or page. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, dates	4.days.ago	10
Skip commercial invoice for NI orders	PHP			a.day.ago	10

```

Shipment confirm request — ShipTo CountryCode GB, postcode BT1 5GS, and no InternationalForms / commercial invoice node

UPS Shipment Label box after confirmation — Tracking No and Print Label only, no Commercial Invoice button

Observation: No commercial invoice was generated for the UPS shipment to Northern Ireland. The shipment confirm request carried ShipTo CountryCode GB with postcode BT1 5GS and contained no InternationalForms / commercial invoice node, and after confirmation the UPS Shipment Label box shows only the Tracking No and Print Label button — the Commercial Invoice button is absent. Working fine.

TC-02 — Repeat the same test with a lowercase postcode entry (e.g. bt1 1aa). Confirm the invoice is still skipped.

Steps

1. Keep the NI snippet Active.
2. Place a second order to the same Belfast address, but type the postcode in lowercase as "bt1 5gs".
3. Open the order in wp-admin and confirm the shipment in the UPS Shipment Label box.
4. Inspect the UPS Shipment Label box and the printed label.

Expected Result

The case-insensitive BT match in the snippet still fires, so no commercial invoice is generated. The postcode is normalised to uppercase on the label.

Version 11.1.0

Order #5654 — UPS Shipment Label box shows Tracking No and Print Label only, no Commercial Invoice button

Observation: Order #5654 was placed with the postcode entered in lowercase ("bt1 5gs"). The snippet's case-insensitive `/^BT/i` match still fired and no commercial invoice was generated — the UPS Shipment Label box shows only Tracking No and Print Label. Working fine.

TC-03 — Confirm the UPS shipping label still shows GB as the destination country (the label/customs destination must not change, only the invoice generation).

Steps

1. Use the shipment created in TC-01.
2. Open the UPS label request/response log for that shipment (or the plugin debug log) and read the destination country code sent to UPS.
3. Open the generated label PDF and read the destination block.

Expected Result

The label request passes country code GB. The filter changes only whether the commercial invoice is generated — it must not alter the destination country or the customs destination.

Evidence

SHIPMENT CONFIRM REQUEST:

```
{"ShipmentRequest":{"Request":{"TransactionReference":{"CustomerContext":"5653"},"RequestOption":"nonvalidate"},"Shipment":{"Description":"Order #5653","ReferenceNumber":{"Code":
```

SHIPMENT CONFIRM RESPONSE:

```
{"ShipmentResponse":{"Response":{"ResponseStatus":{"Code":"1","Description":"Success"},"TransactionReference":{"CustomerContext":"5653"},"ShipmentResults":{"ShipmentCharges":{"T
```

Shipment confirm request for order #5653 — ShipTo CountryCode GB, PostalCode BT1 5GS, no InternationalForms node

Observation: Verified from the shipment confirm request captured for order #5653 (UPS plugin Debug Mode): ShipTo carries "CountryCode":"GB" with "PostalCode":"BT1 5GS", and the request contains no InternationalForms / commercial invoice node. The filter therefore suppresses only invoice generation and leaves the destination country untouched. Working fine. Note: per the dev comment on the card, the printed label renders the destination as "Northern Ireland" while the request still passes GB — that is determined by the postcode and is expected behaviour. The label PDF itself was not opened in this run.

Other GB orders (should still generate commercial invoice as before)

TC-04 — Create an order shipped to a non-NI GB address (e.g. London, postcode starting with a non-BT prefix). Confirm the commercial invoice is generated exactly as before this change.

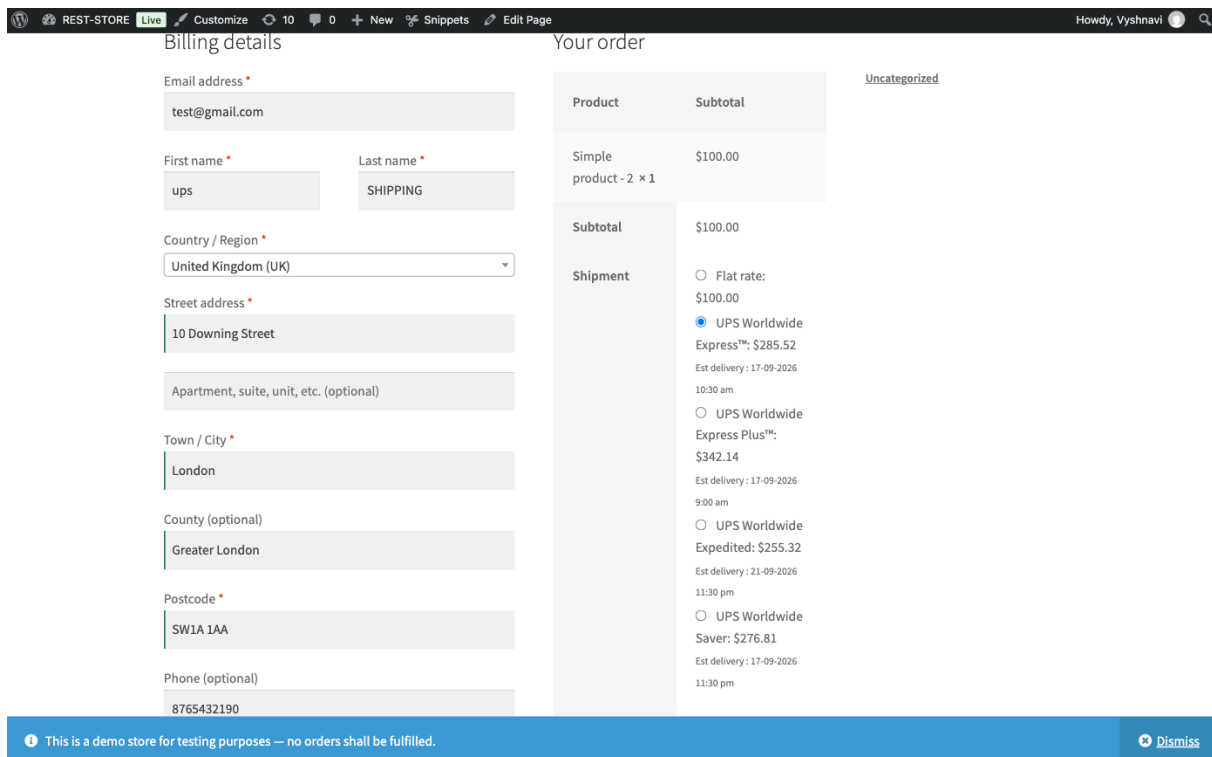

Steps

1. Keep the NI snippet Active.
2. Place an order to a non-NI GB address: Country "United Kingdom (UK)", Town "London", Postcode "SW1A 1AA".
3. Open the order in wp-admin and confirm the UPS shipment.
4. Inspect the UPS Shipment Label box and open the Commercial Invoice.

Expected Result

The snippet's BT prefix check does not match, so the filter returns the original skip flag. The Commercial Invoice button is rendered and the invoice PDF generates exactly as before the change.

Evidence

The screenshot shows a WooCommerce checkout page for a demo store. The page is divided into two main sections: "Billing details" and "Your order".

Billing details:

- Email address: test@gmail.com
- First name: ups
- Last name: SHIPPING
- Country / Region: United Kingdom (UK)
- Street address: 10 Downing Street
- Apartment, suite, unit, etc. (optional):
- Town / City: London
- County (optional): Greater London
- Postcode: SW1A 1AA
- Phone (optional): 8765432190

Checkout with London SW1A 1AA address

The screenshot shows the WooCommerce admin interface with the 'UPS Shipping' plugin active. The 'UPS Shipment Label' window is open, displaying the following information:

Package Details				
Weight	Length	Width	Height	Products (Name x Quantity)
3 LBS	0	0	0	Simple product - 2 X 1

Tracking No: 1ZXXXXXXXXXXXXX

Buttons: [Print Label](#), [Commercial Invoice](#)

RETURN LABEL: [Select Service](#) [Generate Return Label](#)

CANCEL SHIPMENT: [Void Shipment](#)

Upload Additional UPS Documents: [Authorization Form](#) [Choose File](#)

Thank you for selling with WooCommerce. Version 11.1.0

Order #5655 — Commercial Invoice button present alongside Print Label

Observation: Order #5655 (London, SW1A 1AA) was placed with the NI snippet active. The BT prefix check did not match, so the filter returned the original skip flag and the commercial invoice was generated exactly as before — both Print Label and Commercial Invoice buttons are rendered. This is the control proving the filter is selective. Working fine.

EU orders (unaffected by this change)

TC-05 — Create an order from an EU origin to an EU destination with 'Skip commercial invoice for EU' setting enabled. Confirm the existing EU-to-EU skip behavior still works unchanged.

Steps

1. Set the UPS shipper address to an EU origin (e.g. Germany).
2. In the UPS plugin settings, enable "Skip Commercial Invoice for EU Shipments".
3. Place an order to another EU destination (e.g. France).
4. Open the order in wp-admin and confirm the UPS shipment.
5. Inspect the UPS Shipment Label box.

Expected Result

The pre-existing EU-to-EU skip continues to apply: no commercial invoice is generated. Behaviour is identical to the previous release.

Evidence

[Screenshot: UPS settings with "Skip Commercial Invoice for EU Shipments" enabled]

[Screenshot: Shipper address set to the EU origin]

[Screenshot: Order edit page with the EU destination]

[Screenshot: UPS Shipment Label box — no Commercial Invoice button]

Observation: NOT EXECUTED. This case needs the UPS shipper address switched from the current US origin (Harrison, AR) to an EU origin, which changes shared store configuration. "Skip Commercial Invoice for EU Shipments" is currently enabled on the store. To be run separately.

TC-06 — Create an order to a non-GB EU country (e.g. France) with the NI snippet active. Confirm the invoice behavior is unaffected by the new filter (only GB/NI orders are targeted).

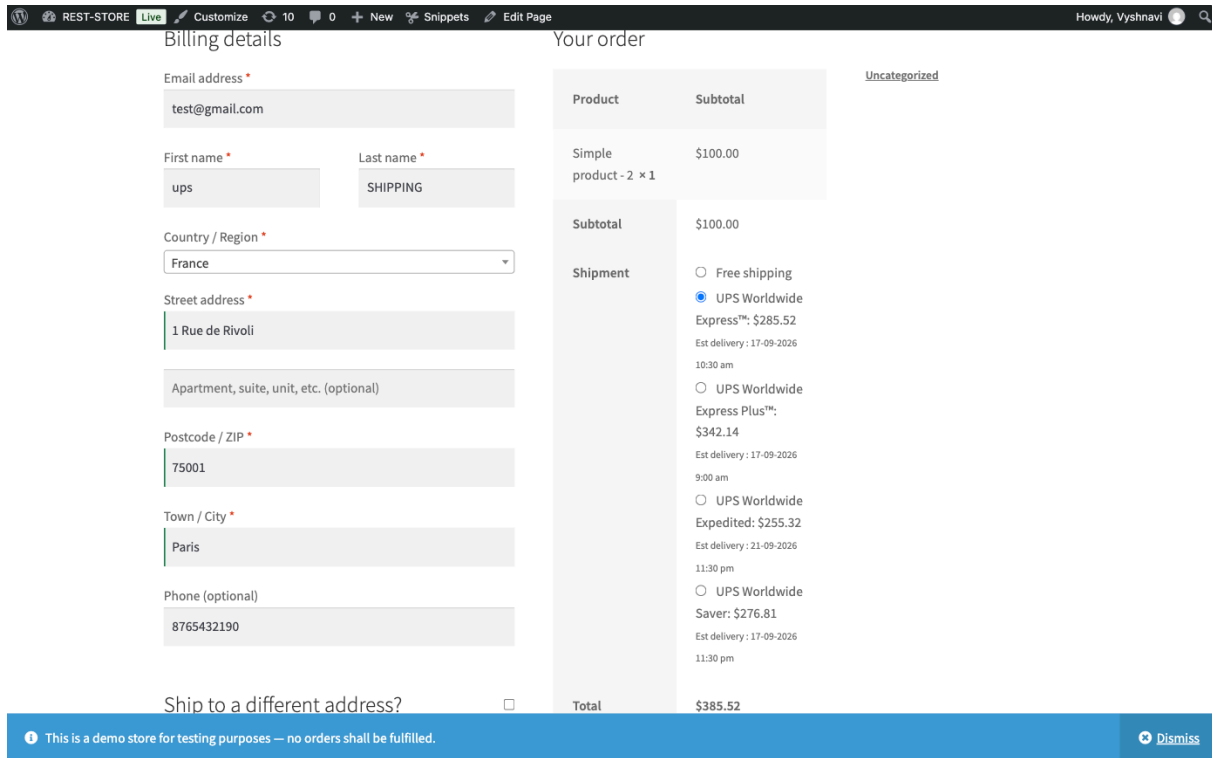

Steps

1. Keep the NI snippet Active.
2. Restore the US shipper address.
3. Place an order to a French address (e.g. Paris, postcode 75001).
4. Open the order in wp-admin and confirm the UPS shipment.
5. Inspect the UPS Shipment Label box.

Expected Result

The snippet only matches GB orders with a BT postcode, so the filter returns the unchanged skip flag and the invoice behaviour for France is exactly as before.

Evidence

The screenshot shows a WooCommerce checkout page for a demo store named 'REST-STORE'. The page is divided into two main sections: 'Billing details' and 'Your order'.

Billing details:

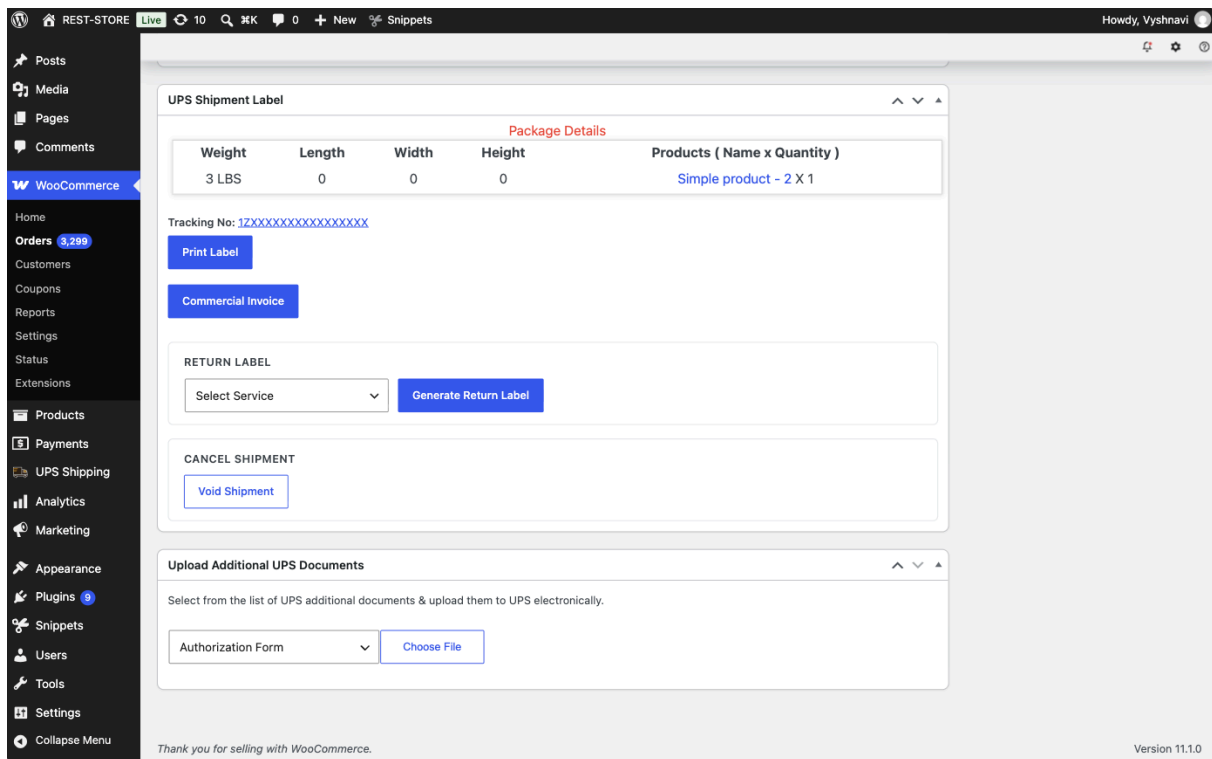

- Email address: test@gmail.com
- First name: ups
- Last name: SHIPPING
- Country / Region: France (selected from a dropdown)
- Street address: 1 Rue de Rivoli
- Apartment, suite, unit, etc. (optional):
- Postcode / ZIP: 75001
- Town / City: Paris
- Phone (optional): 8765432190

Your order:

Product	Subtotal
Simple product - 2 × 1	\$100.00

At the bottom, there is a checkbox for 'Ship to a different address?' which is unchecked. A blue banner at the very bottom states: 'This is a demo store for testing purposes — no orders shall be fulfilled.' with a 'Dismiss' button.

Checkout with Paris 75001 (France) address

The screenshot displays the 'UPS Shipment Label' interface within a WooCommerce environment. The sidebar on the left contains navigation links for Posts, Media, Pages, Comments, WooCommerce, Home, Orders (3,299), Customers, Coupons, Reports, Settings, Status, Extensions, Products, Payments, UPS Shipping, Analytics, Marketing, Appearance, Plugins (9), Snippets, Users, Tools, Settings, and Collapse Menu. The main content area is titled 'UPS Shipment Label' and includes a 'Package Details' table with columns for Weight, Length, Width, Height, and Products (Name x Quantity). The table shows a weight of 3 LBS, length of 0, width of 0, height of 0, and a product 'Simple product - 2 X 1'. Below the table, there is a 'Tracking No.' field with a placeholder '1ZXXXXXXXXXXXXX' and a 'Print Label' button. A 'Commercial Invoice' button is also present. The 'RETURN LABEL' section features a 'Select Service' dropdown and a 'Generate Return Label' button. The 'CANCEL SHIPMENT' section has a 'Void Shipment' button. The 'Upload Additional UPS Documents' section includes an 'Authorization Form' dropdown and a 'Choose File' button. The footer of the interface shows 'Thank you for selling with WooCommerce.' and 'Version 11.1.0'.

Order #5656 — Commercial Invoice button present

Observation: Order #5656 (Paris, France) was placed with the NI snippet active. The snippet targets only GB orders with a BT postcode, so the invoice behaviour for France was unaffected and the Commercial Invoice button is rendered as before. Working fine.

Non-EU orders (unaffected by this change)

TC-07 — Create an order shipped to a non-EU, non-GB destination (e.g. United States). Confirm the commercial invoice is generated as before, unaffected by the new filter.

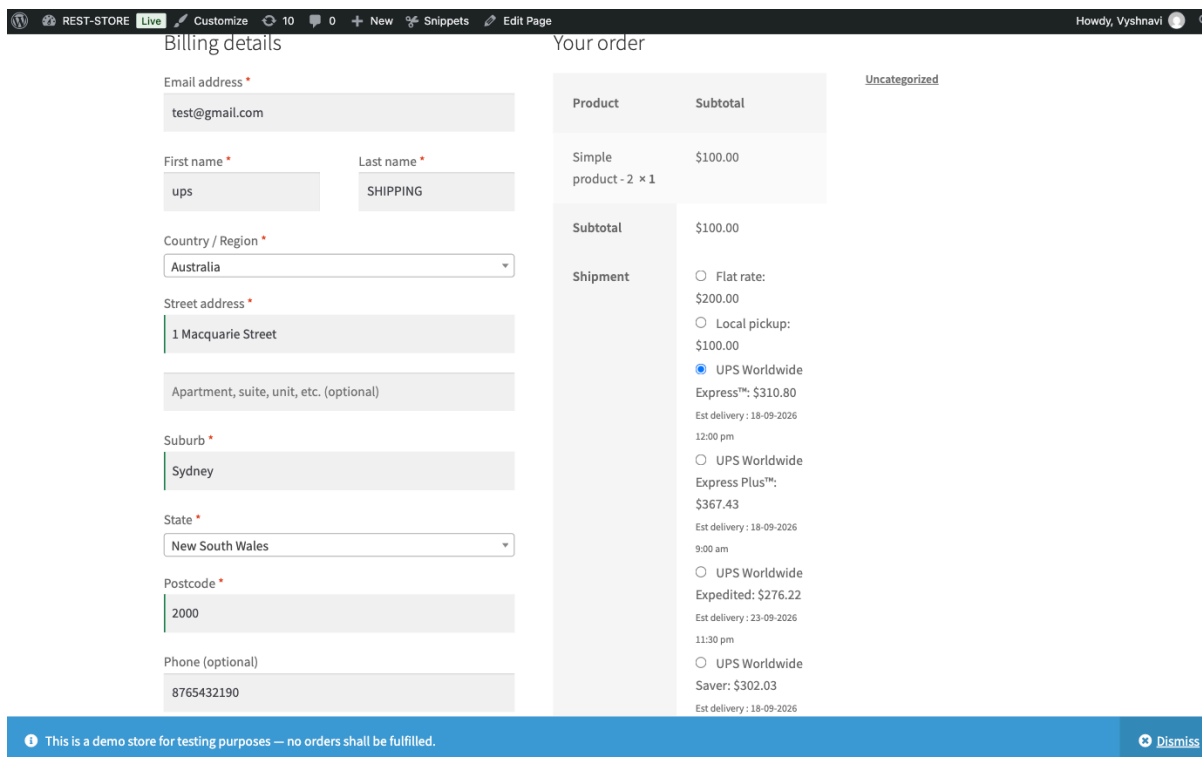

Steps

1. Keep the NI snippet Active.
2. Place an order to a domestic/non-EU destination handled as an international shipment by the store's configuration (e.g. a United States address from a non-US shipper).
3. Open the order in wp-admin and confirm the UPS shipment.
4. Inspect the UPS Shipment Label box and open the Commercial Invoice.

Expected Result

The commercial invoice is generated as before. The new filter has no effect on non-GB destinations.

Evidence

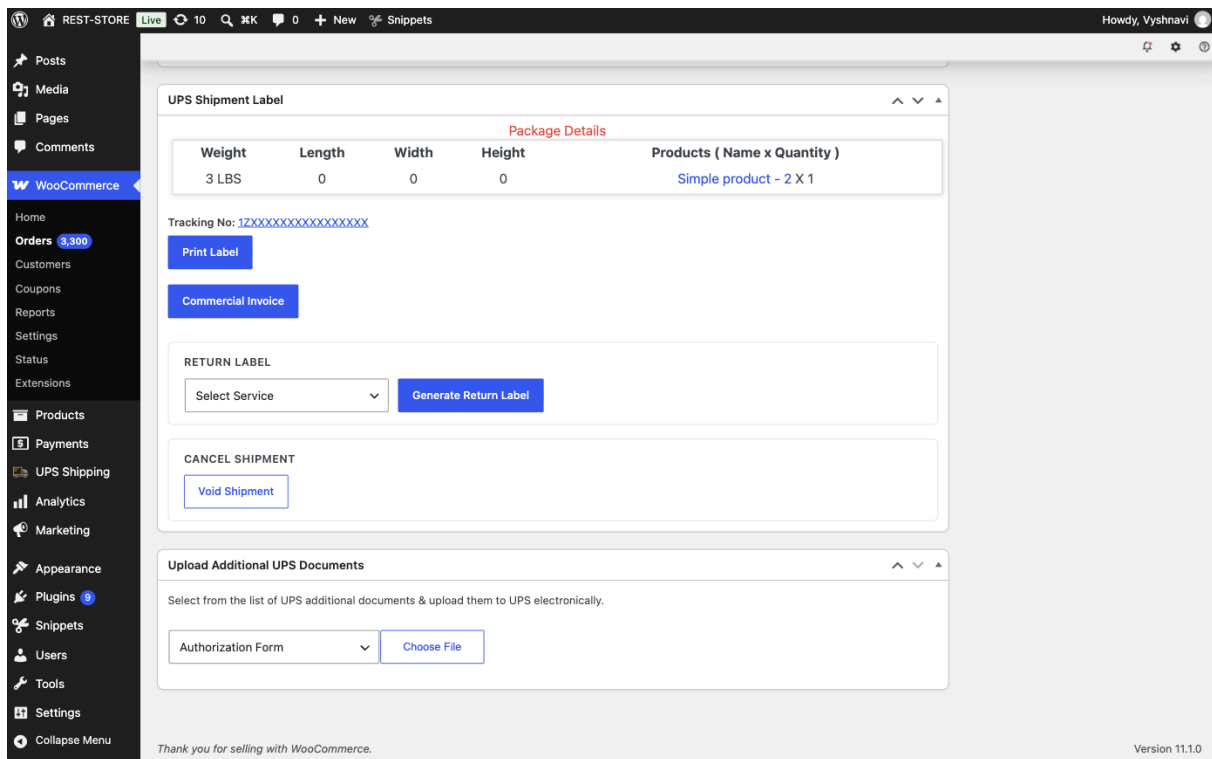

The screenshot shows a WooCommerce checkout page with the following details:

Checkout with Sydney NSW 2000 (Australia) address

The screenshot displays the 'UPS Shipment Label' interface within a WooCommerce store. The left sidebar shows the 'WooCommerce' menu with various options like Home, Orders (3,306), Customers, Coupons, Reports, Settings, Status, Extensions, Products, Payments, UPS Shipping, Analytics, Marketing, Appearance, Plugins (9), Snippets, Users, Tools, Settings, and Collapse Menu. The main content area is titled 'UPS Shipment Label' and includes a 'Package Details' section with a table showing Weight (3 LBS), Length (0), Width (0), Height (0), and Products (Simple product - 2 X 1). Below this, there is a 'Tracking No.' field with a placeholder '1ZXXXXXXXXXXXXX' and a 'Print Label' button. A 'Commercial Invoice' button is also present. The 'RETURN LABEL' section has a 'Select Service' dropdown and a 'Generate Return Label' button. The 'CANCEL SHIPMENT' section has a 'Void Shipment' button. At the bottom, the 'Upload Additional UPS Documents' section has an 'Authorization Form' dropdown and a 'Choose File' button. The footer of the interface includes the text 'Thank you for selling with WooCommerce.' and 'Version 11.1.0'.

Order #5657 — Commercial Invoice button present

Observation: Order #5657 was placed to Sydney, Australia — a non-EU, non-GB destination — with the NI snippet active. The commercial invoice was generated as before, unaffected by the new filter. Working fine. Note: Australia was used instead of the United States named in the checklist because the store's shipper is already a US address (Harrison, AR); a US destination would be a domestic shipment and would never generate a commercial invoice, so it would not exercise this case.

Filter mechanics / regression check

TC-08 — With the NI snippet deactivated (no filter callback registered), confirm all order types behave exactly as they did before this update (no regression when the filter isn't used).

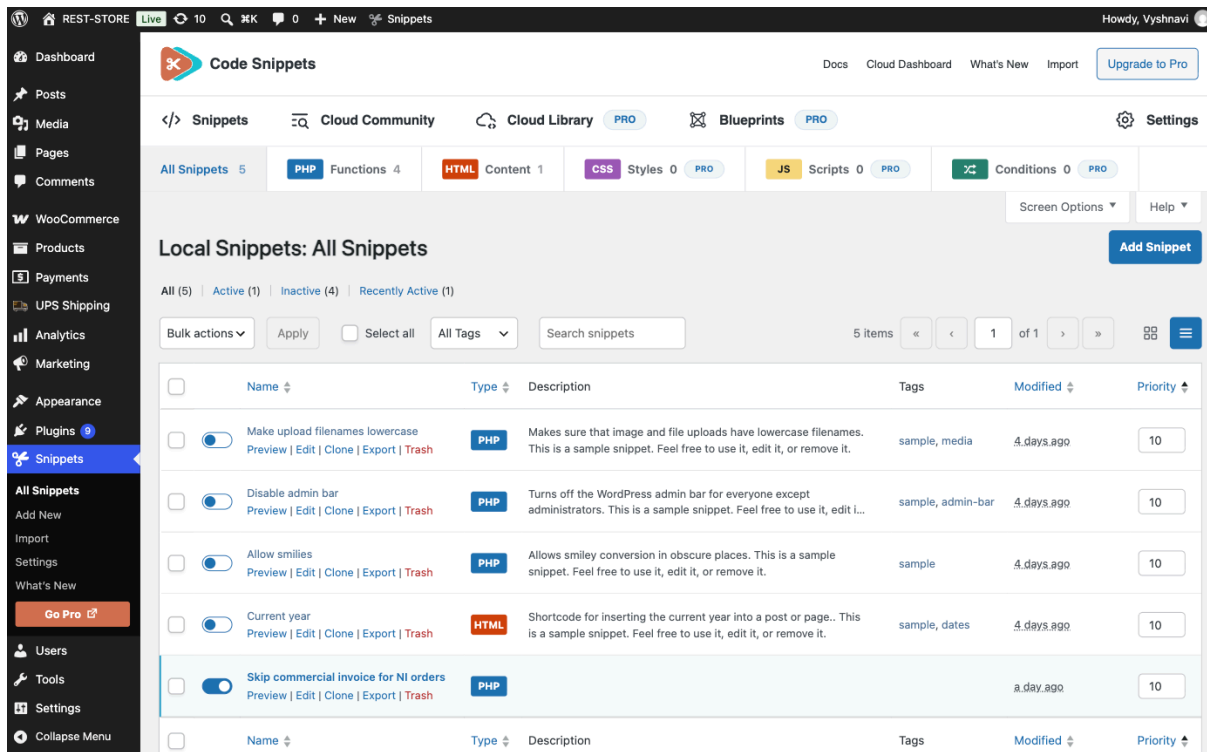

Steps

1. Go to Snippets → All Snippets and deactivate "Skip commercial invoice for NI orders".
2. Re-run each scenario below and record the commercial invoice outcome for each:
 3. a. EU→EU shipment with "Skip Commercial Invoice for EU Shipments" disabled.
 4. b. EU→EU shipment with "Skip Commercial Invoice for EU Shipments" enabled.
 5. c. EU→non-EU & non-GB shipment with "Skip Commercial Invoice for EU Shipments" disabled.
 6. d. US→NI shipment with "Skip Commercial Invoice for EU Shipments" disabled.
 7. e. US→NI shipment with "Skip Commercial Invoice for EU Shipments" enabled.
8. Compare each outcome against the pre-6.6.4 behaviour.

Expected Result

With no callback registered on `ph_ups_skip_commercial_invoice` the filter returns the computed flag untouched, so every scenario matches the previous release. In particular, US→NI shipments generate a commercial invoice again (the pre-fix behaviour).

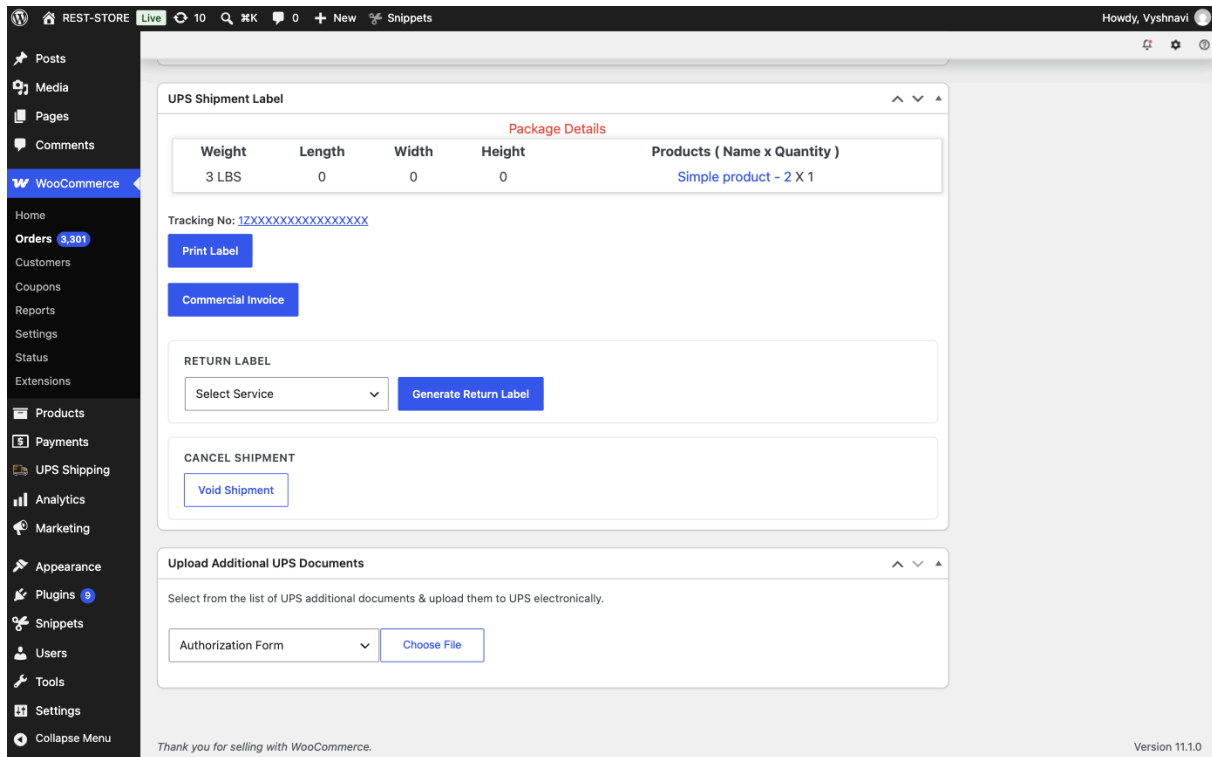

Evidence

The screenshot shows the WordPress dashboard with the Code Snippets plugin installed. The 'Snippets' menu item is selected in the left sidebar. The main content area displays 'Local Snippets: All Snippets'. A table lists several snippets, including 'Skip commercial invoice for NI orders', which is currently deactivated (indicated by a blue toggle switch).

Name	Type	Description	Tags	Modified	Priority
Make upload filenames lowercase	PHP	Makes sure that image and file uploads have lowercase filenames. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, media	4.days.ago	10
Disable admin bar	PHP	Turns off the WordPress admin bar for everyone except administrators. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, admin-bar	4.days.ago	10
Allow smilies	PHP	Allows smiley conversion in obscure places. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample	4.days.ago	10
Current year	HTML	Shortcode for inserting the current year into a post or page.. This is a sample snippet. Feel free to use it, edit it, or remove it.	sample, dates	4.days.ago	10
Skip commercial invoice for NI orders	PHP			a.day.ago	10

Snippet "Skip commercial invoice for NI orders" deactivated

Order #5658 — same Belfast BT1 5GS address with the snippet off: Commercial Invoice button returns

Observation: PARTIALLY EXECUTED. With the snippet deactivated, order #5658 was placed to the same Belfast BT1 5GS address used in TC-01. The Commercial Invoice button returned, i.e. the pre-6.6.4 behaviour is restored exactly when no callback is registered on `ph_ups_skip_commercial_invoice` — no regression from the filter itself. Compared directly against order #5653 (same address, snippet on, no invoice), this is a clean A/B. The four EU-origin sub-scenarios listed above (EU→EU and EU→non-EU with the EU skip setting toggled) were NOT run, as they require the shipper address to be switched to an EU origin.

TC-09 — Confirm no PHP warnings/notices appear in the debug log when placing orders across all the above destination types.

Steps

1. Enable `WP_DEBUG` and `WP_DEBUG_LOG` on the store and clear `wp-content/debug.log`.
2. Re-run one order per destination type: NI (BT), non-NI GB, EU, non-EU, with the snippet both active and inactive.
3. Open `wp-content/debug.log` and search for warnings or notices raised from `class-ph-shipping-ups-rest-admin.php` or the `wf_ups_shipment_confirmrequest()` path.

Expected Result

No PHP warnings, notices or deprecations are logged from the UPS plugin for any destination type, with the filter both registered and unregistered.

Evidence

[Screenshot: debug.log contents after the full run]

Observation: NOT EXECUTED. Enabling WP_DEBUG / WP_DEBUG_LOG requires editing wp-config.php, which is not reachable from wp-admin. No PHP warnings or notices were surfaced on screen during any of the orders placed in this run, but the debug log was not inspected.
